REACH INFORMATION

JANUARY 2012

REACH is European regulation (EC) no. 1907/2006 concerning the registration, evaluation, authorisation and restriction of chemical substances. It entered into force on 1 June 2007. Its objective is to improve knowledge of the chemical products placed on the market by manufacturers and to contribute to the health of users of the said products, in particular by withdrawing the most dangerous substances.

Chemical substances will be evaluated progressively between now and 2018 and some of them will be included on the candidate list for authorization: (<http://echa.europa.eu/web/guest/candidate-list-table#download>).

One of the obligations of Renault Trucks is to inform the recipient of an article (vehicle, spare part or any other article sold) when a substance on the candidate list is present in a concentration greater 0.1% by weight in these articles.

Renault Trucks undertakes to communicate the list of parts concerned based on data gathered from its suppliers. This list together with information on the substance under consideration is accessible via the link below.

This list is updated regularly in line with new information received from our suppliers.
